

Contoso Engineering (illustrative mock)

AI-SDLC roadmap G1

Direction, people and value

ASSESSMENT DATE	2026-09-27
FRAMEWORK VERSION	2.0.2
RESPONDENTS	14
GENERATED ON	2026-09-29

G1: Direction, people and value

ID	DIMENSION	SCORE	LEVEL	TARGET	GAP	PRIORITY	HORIZON
D1	AI Strategy, Policy and Governance	2.82	L3 Scaling	3.00	0.18	P3 Low	Backlog / monitor
D2	Enablement, Skills and Culture	2.28	L2 Adopting	3.00	0.72	P3 Low	Backlog / monitor
D9	Measurement, Value and AI FinOps	1.61	L2 Adopting	3.00	1.39	P2 Medium	Semester

D1: AI Strategy, Policy and Governance

DORA identifies a "clear and communicated AI stance" as an amplifier of AI benefits [1], [2]; Microsoft CAF states that "every agent must be observable, governed, and secure" [19].

Start here

D1-Q5 Autonomy levels for AI work (2.69, L3) **unverified**

L3 target: A published matrix maps task types (for example dependency upgrades, test generation, feature work, production changes) to autonomy levels and required approvals.

Then L4: The matrix is enforced by platform rules (for example branch protection, required reviewers per path) and updated from incident and quality data. [7][26][32][49][56]

D1-Q6 Responsible AI and risk framework (2.71, L3)

L3 target: A named framework is adopted; AI-related risks are in the risk register with owners and reviews.

Then L4: Framework controls are audited internally or externally; results feed back into policy and tooling. [20][21][41][42]

D1-Q3 Approved tools and models (2.75, L3) **unverified**

L3 target: Enterprise/organization policies enable only approved features and models; the catalog lists owner, data handling and review date for each tool.

Then L4: New models and tools go through a defined evaluation per task type (quality, cost, security) before enablement; retired ones are removed on schedule. [2][15][32][49]

Recommended strategies

- S5 GitHub Copilot Acceleration (P2 Medium, Semester)
- S6 Agentic Activation (P2 Medium, Semester)
- S7 Security & Governance (P2 Medium, Semester)

All questions in this dimension

ID	QUESTION	SCORE	N	NA	EVIDENCE
D1-Q1	AI strategy for software engineering unverified	2.77	13	1	5
D1-Q2	Acceptable-use policy	2.93	14	0	7
D1-Q3	Approved tools and models unverified	2.75	12	2	2
D1-Q4	Data protection, IP and residency unverified	3.08	13	1	5
D1-Q5	Autonomy levels for AI work unverified	2.69	13	1	5
D1-Q6	Responsible AI and risk framework	2.71	14	0	7
D1-Q7	Agent registry and identity unverified	2.79	14	0	5

D2: Enablement, Skills and Culture

Gartner expects GenAI to require 80% of the engineering workforce to upskill through 2027 [30]; DORA asks about training, peer learning and support for experimentation [2].

Start here

D2-Q1 Structured AI training (2.15, L2)

L3 target: Role-based curriculum (developer, reviewer, platform, security) with completion tracked; training is required before agent features are enabled; it teaches learning-preserving patterns (ask for explanations, attempt first, then compare) and not only full delegation.

Then L4: Curriculum is updated each quarter from usage data and failure patterns; advanced tracks exist (agent orchestration, evaluation). [2][30][48]

D2-Q6 AI-assisted onboarding (2.15, L2)

L3 target: Onboarding includes AI-guided codebase tours and repository instructions; time to first merged PR is tracked; new engineers are checked on code reading and debugging, not only output.

Then L4: Ramp-up and skill metrics are compared across cohorts and used to improve onboarding material and instructions. [27][48]

D2-Q4 Context-engineering skills (2.21, L2)

L3 target: Guidance and examples on context engineering are part of training; teams review their instructions and prompts for quality.

Then L4: Context practices are measured (for example success rate or token use per task) and improved over time. [25][30][32]

Recommended strategies

- S5 GitHub Copilot Acceleration (P2 Medium, Semester)

All questions in this dimension

ID	QUESTION	SCORE	N	NA	EVIDENCE
D2-Q1	Structured AI training	2.15	13	1	5
D2-Q2	Peer learning and champions	2.36	14	0	6
D2-Q3	Support for experimentation	2.57	14	0	7
D2-Q4	Context-engineering skills	2.21	14	0	5
D2-Q5	Roles and career paths	2.21	14	0	7
D2-Q6	AI-assisted onboarding	2.15	13	1	5

D9: Measurement, Value and AI FinOps

controlled studies range from 55.8% faster [33] and 26.08% more completed tasks [34] to 19% slower with a strong perception gap [35], so organizations need their own objective measurement; Gartner predicts AI coding costs will overtake the average developer's salary by 2028 [32].

Start here

D9-Q3 Pull request flow metrics (1.33, L1)

L3 target: PR lifecycle metrics are reported per organization; agent-authored PRs are identified separately, including their post-merge fix rate.

Then L4: Flow metrics are tied to quality metrics (D5) so that faster flow is not bought with instability. [6][34][50]

D9-Q7 Business value linkage (1.54, L1)

L3 target: A business case with explicit assumptions exists and is reviewed at least yearly.

Then L4: Value is reported on a fixed cadence with measured inputs from D9-Q1 to Q6; investment is adjusted from results. [18][28][32]

D9-Q4 Developer experience and friction (1.57, L1)

L3 target: A survey runs at least twice a year with good participation; results are shared and acted on.

Then L4: Survey results are combined with telemetry (D9-Q1 to Q3) to find and remove friction. [2][44]

Recommended strategies

- S2 Foundry + SRE (P1 High, Next quarter)
- S5 GitHub Copilot Acceleration (P2 Medium, Semester)

All questions in this dimension

ID	QUESTION	SCORE	N	NA	EVIDENCE
D9-Q1	Adoption depth metrics	1.79	14	0	7
D9-Q2	Delivery outcome metrics	1.61	13	1	6
D9-Q3	Pull request flow metrics	1.33	12	2	3
D9-Q4	Developer experience and friction	1.57	14	0	7
D9-Q5	Controlled measurement of impact	1.64	14	0	8
D9-Q6	AI cost governance (AI FinOps)	1.79	14	0	7
D9-Q7	Business value linkage	1.54	11	3	5
